

After approximately 15,000 uses, there will be a small amount of blue Odour Barrier Liquid on top of the Drain Insert. This indicates it is time to change out the Odour Barrier Liquid and the Drain Insert.

Screw the key into one of the holes of the Drain Insert and pull upward to remove. When insert is pulled, the contents of the waste trap empties into the waste line.

Insert replacement

Dispose the Drain Insert and key in a plastic bag.

Rinse the trap with two buckets of warm water. If necessary, use a small brush around the stainless steel ring.

Take a new Drain Insert and place it in the waste trap.

Press down on the drain insert until you feel and hear a slight popping sound. The insert must be tight.

Pour about approximately 1 litre of water over the Drain Insert. Then slowly pour the **entire contents of the Odour Barrier 0.35 litre** onto the Drain Insert. Wipe clean. The ZeroFlush Urinal is now ready for use.
