

Specifying ZeroFlush

To save on water requirements for urinals a zero water usage system shall be installed. The urinal shall be manufactured in Vitreous China and be wall hung.

To ensure an average 15,000 uses before maintenance the unit shall have a built-in centre draining non-removable trap housing with a capacity of not less than 1.3 litres.

The operation of the trap will be completed by a push fit insert with no special tools required.

To ensure quick, easy and economical maintenance the urinals shall have a lift and replace insert system. No replacement cartridges shall be necessary.

To ensure an odour free environment with no odour barrier top ups between maintenance intervals the trap shall be filled with a minimum of 0.35 litres of odour barrier sealant.

The system shall withstand the periodic pouring of a bucket of water into the urinal without the loss of odour barrier sealant.

Odour barrier sealant should be 100% natural and fully biodegradable.

The system shall require no special cleaning chemicals.

The unit is to be a ZeroFlash Urinal, for further information contact:
